 Aberdeenshire Council
 Marr Area Committee, Aberdeenshire Council,
 Small Grant Project Scheme
 Mid Hill Wind Farm
 Lithic Studies Society

10.2 People

First and foremost, thanks are due to the many people who have volunteered their skills and time to make this project possible. Whether fieldwalking, finds washing, organising, driving or analysing; your contribution underpins the whole venture. Sincere thanks must also go to the many landowners and farmers who have permitted and facilitated access to fields and riverbank; without your support this work could not have taken place. Particular thanks are owed to the Crathes Hall Trust for essential car parking facilities and for kindly facilitating the use of the hall. In addition, we would like to acknowledge the many local people who have provided support, knowingly and unknowingly, in terms of enthusiasm and interest at lectures, local shows and open days: we are each keen to unravel the story of the prehistoric communities of Deeside, but it is your wider support that makes it all meaningful.

Historic Environment Scotland facilitated the test pitting at Nethermills Farm 4 and the writing up of that work in the context of the whole project. Dinkar Sabnis is to be thanked in particular for support and friendship. Bruce Mann has remained a staunch critical friend and supporter, in particular advising in times of financial need and helping to keep the text on the straight and narrow. Torben Ballin has been ever ready to discuss and advise on the Late Upper Palaeolithic material. Michael Stratigos advised on the Loch of Park. Jacob Metson tracked down the correct location of the Bridge of Don flints and has been working to reassess them. Martin Bates braved the elements to discuss the niceties of terrace formation in February and Josh Wright kept

the project straight with random sampling and the laying out of test pits. Claire Smith from Aberdeen Young Archaeologists Club provided enthusiastic oversight and support during their participation. Data from OFARS/NESARS survey work is by permission of Heather Sabnis. Graeme Warren and Jill Harden have been helpful critical friends and their comments have served to strengthen this report in many places. Two anonymous referees took the time to read the lengthy text and suggest many useful amendments and improvements.

Donald Herd, Gemma Broomhead and Lanita Gutieve are all thanked for their contributions to the topographic and electromagnetic ground conductivity survey. Aimee Little, Jess Bates and Alexandre Lucquin from the YEAR Centre at the University of York are thanked for their work on the flint blade from Balbridie, and Jess Bates for her help with the photographs of this piece and the blade from Star Carr. Sarah Boyd from the University of St Andrews took a diversion from her PhD research to model past relative sea-level change around Aberdeen and provide images and information.

Dr John Grieve and Dr James Kenworthy are no longer with us, but their enthusiasm set us out on this route, and we hope that the present volume is a fitting tribute to their work.

10.3 Images

The reproduction of extracts from the Ordnance Survey maps are all © Crown Copyright/database right 2020. An Ordnance Survey/EDINA supplied service.

Unless otherwise noted all images are copyright Mesolithic Deeside. GIS plots and mapping are by Irvine Ross unless otherwise acknowledged.

All of the photographs of lithic artefacts are by Christopher Bell.
